

12/4/2020

To Whom It May Concern,

Flash Fill Services was utilized by Oftedal Construction from 4/27/20 to 5/1/20 in Colstrip, Montana. Part of our contract with Talen Energy was to decommission four circ water lines that ran from Units 1 and 2 generators to their respective cooling towers. Flash fill installed 3935 cy of cellular grout in pipes that varied from 54" to 72" diameter.

Flash fill required nothing from Oftedal other than an adequate water supply to perform their work. They were flexible in the order of the locations we asked them to work. They also coordinated well with other work ongoing in the plant.

I would not hesitate to make Flash Fill my first call the next time I need cellular grout.

Sincerely,
Oftedal Construction

Cameron Lundby
Project Manager
